

script.js

// Add your JavaScript code here

```
const commentForm = document.getElementById('comment-form');
```

```
const commentsList = document.getElementById('comments-list');
```

```
commentForm.addEventListener('submit', (e) => {
```

```
  e.preventDefault();
```

```
  const name = document.getElementById('name').value;
```

```
  const comment = document.getElementById('comment-text').value;
```

```
  // Add comment to commentsList
```

```
  const commentHTML = `

<strong>${name}</strong>: ${comment}</p>`;

```

```
  commentsList.innerHTML += commentHTML;
```

```
  // Clear form fields
```

```
  document.getElementById('name').value = "";
```

```
  document.getElementById('comment-text').value = "";
```

```
});
```

Note that this is just a basic separation of concerns, and you may need to modify the code to fit your specific requirements.
